### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Phillip E. Miller on 4/13/2009.

The application has been amended as follows:

Replace Claim 19 with:

Claim 19. The alignment process apparatus according to claim 18, characterized in that a thickness of the magnetic flux induction member is 1.0 to 3.5mm.

Replace Claim 20 with:

Claim 20. The alignment process apparatus according to claim 18, characterized in that a thickness of the magnetic flux induction member is comprised of super-hard material.

Replace Claim 21 with:

Claim 21. The alignment process apparatus according to claim 19, characterized in that a thickness of the magnetic flux induction member is comprised of super-hard material.

Replace Claim 22 with:

Claim 22. The alignment process apparatus according to claim 18, characterized in that an aligning magnetic field of a region of the cavity in which the No. 2 dice are present induces magnetic flux greater than 0.5T.

Replace Claim 23 with:

Claim 23. The alignment process apparatus according to claim 19, characterized in that an aligning magnetic field of a region of the cavity in which the No. 2 dice are present induces magnetic flux greater than 0.5T.

Replace Claim 24 with:

Claim 24. The alignment process apparatus according to claim 20, characterized in that an aligning magnetic field of a region of the cavity in which the No. 2 dice are present induces magnetic flux greater than 0.5T.

Replace Claim 26 with:

Claim 26. The alignment process apparatus according to claim 18, further comprising a ring comprising cylindrical thin-wall magnetic super-hard material which forms an inner surface of the cavity, disposed on the outer periphery of the core.

Replace Claim 27 with:

Claim 27. The alignment process apparatus according to claim 19, further comprising a ring comprising cylindrical thin-wall magnetic super-hard material which forms an inner surface of the cavity, disposed on the outer periphery of the core.

Replace Claim 28 with:

Claim 28. The alignment process apparatus according to claim 20, further comprising a ring comprising cylindrical thin-wall magnetic super-hard material which forms an inner surface of the cavity, disposed on the outer periphery of the core.

Replace Claim 29 with:

Claim 29. The alignment process apparatus according to claim 21, further comprising a ring comprising cylindrical thin-wall magnetic super-hard material which forms an inner surface of the cavity, disposed on the outer periphery of the core.

Replace Claim 30 with:

Claim 30. The alignment process apparatus according to claim 22, further comprising a ring comprising cylindrical thin-wall magnetic super-hard material which forms an inner surface of the cavity, disposed on the outer periphery of the core.

### ***Election/Restrictions***

Applicant's election without traverse of Group II, claims 18-33 in the reply filed on 08/05/2008 is acknowledged.

This application is in condition for allowance except for the presence of claims 10-17 directed to Group I non-elected without traverse. Accordingly, claims 10-17 have been cancelled.

***Allowable Subject Matter***

Claims 18-33 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record does not teach nor suggest, in the claimed combination, an alignment process apparatus for manufacturing, by molding using a die, a hollow cylindrical-shaped anisotropic bonded magnet for use in a 4-pole motor wherein the apparatus has two different dice structures wherein magnetic coils are used to impart the magnetic field to the magnet mold wherein No. 1 one dice, comprising of a magnetic body divided into quarters forming an aligning magnetic field in the normalized direction of the cavity, disposed on the outer periphery of the core and facing the center of the core; No.2 two dice divided into quarters, comprising a non-magnetic body disposed on the outer periphery of the core and facing the center of the core, and, corresponding to the transition region in which the direction of the magnetic poles of the bonded magnet changes, located between the adjacent No. 1 dice; coils conferring magnetic flux on the four No. 1 dice.
